IMPORTANT WARNINGS

Rack Installation

Inadequately secured loads and incorrectly mounted roof racks and accessory racks can come loose during travel and cause serious accidents! Therefore, installation, handling and use must be carried out in accordance with product and vehicle instructions.

In addition to these instructions, review the mounting instructions for the roof rack and the operating instructions of the vehicle.

These instructions should be kept together with the vehicle's operating instructions and carried in the vehicle when in use and en route.

For roof racks that do not specify the distance between the front and rear crossbars, the distance shall be at least 700mm or as large as possible. Please note that changes (e.g. additional drill holes) to the accessory rack's attachment system are not permissible.

Check attachment hardware and load for tight fit and function:

- Before the start of any journey.
- After driving a short distance (50 km or 30 minutes) following rack or load install.
- At regular intervals on longer journeys.
- Every two hours on bad terrain.
- After interruption of a journey during which the vehicle was left unsupervised. (check for damage due to outside intervention)

Rack Loading

Do not exceed the maximum load specified for the roof rack, accessory rack or the maximum load recommended by the vehicle manufacturer.

Max Roof Load = weight of roof rack + weight of accessory racks + weight of load.

NOTE - Maximum load limits apply in static and dynamic situations. Do not overload your vehicle roof or racks at any time regardless of your vehicle being stationary or in motion.

Tie down long or wide loads, such as watercraft, at the front and rear of the load. If it looks like it can catch some air, it will. Tie it down!

Do not carry odd shaped or unstable objects such as furniture, mattresses, or any other objects that can not be securely tied down.

Vehicle Driving and Regulations

The speed driven must be suited to the load transported and to official speed limits. In the absence of any speed limits, we recommend a maximum speed of 130 km/h.

When transporting any load, the speed of the vehicle must take into account all conditions such as the state of the road, the surface of the road, traffic conditions, wind, etc. Vehicle handling, cornering, braking and sensitivity to side winds will change with the addition of roof top loads.

In the event of product use on a vehicle that is driven off sealed roads the maximum load is reduced by 50% for clamp mounted systems and 33% for track, fixed point and other types of mounting systems.

Maintenance

The accessory rack should be carefully cleaned and maintained, particularly during the winter months. Use only a solution of water and standard car wash liquid without any alcohol, bleach or ammonium additives.

Periodically inspect accessory rack for damage. Replace lost, damaged or worn parts. Use only original spare parts obtained from a stocking specialist, dealer or manufacturer.

Any changes made to the roof racks and accessory racks as well as the use of spare parts or accessories other than those supplied by the manufacturer will lead to the lapsing of the manufacturer's warranty and liability for any material damage or accidents. You should observe these instructions to the letter and only use the original parts supplied.

This document and all of our instructions are reviewed and updated regularly. Always refer to our websites for the latest revisions.
